The advantages:

allows an easy removing of filling chamber

fast amortization

reduce workload

limits the risk of material damage

increase of productivity

accident prevention

Innovative shot sleeve extraction device developed by Druckguss Service Deutschland GmbH solves your problem with stuck shot sleeves in chamberholder or form. The compact design enables a fast and secure clamping, extraction, storage as well as transport of the filling chamber.

In combination with our form handling devices they will shorten the set-up times of your die casting machines to a minimum.

Consisting of:

Hydraulics aggregate

Universal for all extractors

Extraction device

With a stroke of 60 mm
(expandable for further 60 mm with adapter ring)

Clamping wedges

For the needed diameter of chamber

Inquiry:

Extraction device	Ø 140-200 mm	_____
Extraction device	Ø 190-250 mm	_____
Extraction device	Ø 240-300 mm	_____
Set of clamping wedges	Ø _____ mm	_____

Transport device for the extraction device:

Ideal for in-plant transport of equipment and accessories

Options:

Transport device for the injection chamber:

Ideal for in-plant transport of the injection chamber from the machine to the tool storage.

Adapter ring 60 mm

Extends the stroke in only one clamping by further 60 mm.

The extraction device in action...
